

WARNING!

- **Never go to the Coast to watch for a tsunami if you hear that a warning has been issued. Tsunamis move faster than a person can run. Any incoming traffic in the coastal area hampers safe and timely evacuation.**
- **Tsunamis are not surfable! They are not V-shaped or curling waves. large tsunamis most frequently come onshore as a rapidly rising turbulent surge of water choked with debris.**
- **All tsunamis are potentially dangerous, though they may not damage every coastline they strike.**
- **Our coastlines are vulnerable. Understand the hazard and learn how to protect yourself.**
